

Locarta

Complete Automated Vehicle Location System

With the latest in tracking technology, Locarta makes it easier and more affordable than ever to know the location of your vehicles at all times. From making delivery routes more efficient to cutting costs through better employee supervision, you can do it all with a small device called the Locarta 2020. Integrated in the device is a Multi-Tech SocketModem® wireless GPRS module providing the communication link required to return a vehicles location.

The Locarta 2020 is in-vehicle hardware that measures 3.25" x 2" x 0.9". It works along with the Locarta Dashboard software, the interface between the 2020 and the mapping software. These are all the tools you need to track your fleet.

The SocketModem GPRS modem module, embedded in the Locarta 2020 is used to communicate with a target computer via a GPRS cellular network and the Internet. When called upon, it returns a vehicle's GPS location on a real-time basis. The computer displays the vehicle's current location with an icon on a map.

The system is software-based. This means that there are no monthly fees from Locarta, just the monthly fee from your communications provider (Cingular, Sprint/Nextel, or T-Mobile). It also means that you have all of your vehicles' location data on your own computer, not on someone else's (no "Big Brother") so the information remains private.

"Our engineers chose the Multi-Tech SocketModem module based on its small form factor, ease of integration, functionality, and universal socket interface," explains Kate Burch, Marketing and PR Coordinator. "These features, along with the fact that it is certified with the cellular network carriers, makes the SocketModem module a perfect fit for our solution."

"The Locarta Vehicle Tracking Solution is smarter than others out there," says Burch. "Managing your fleet has never been easier."

SocketModem GPRS

- GPRS Class 10
- Dual-band 850/1900 or 900/1800 MHz GSM/GPRS
- Packet data up to 85.6K bps
- Universal Socket Connectivity

Locarta Technologies, Inc.

is an automated vehicle location (AVL) firm located in Oklahoma City, OK. In business since 2000, Locarta develops

and markets AVL products that utilize GPS (Global Positioning System), GIS (Geographic Information Systems), and wireless technologies. Locarta focuses on vehicle tracking solutions that are easy to use and affordable, while producing a quality, real-time system. Locarta is location and cartography for vehicles.
