

# ERCO & GENER

## Turnkey M2M Data Collection with Multiple Universal Interfaces

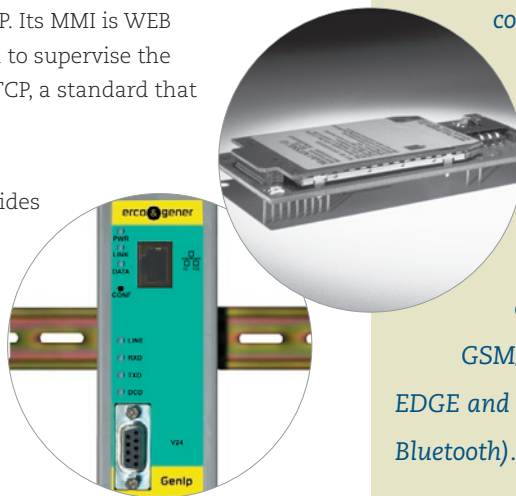

ERCO & GENER has been providing the M2M market with turnkey and off-the-shelf solutions since 1981. Today, Multi-Tech has made their turnkey automatic data collection solutions even more valuable by providing a universal socket connectivity platform. This unique architecture gives ERCO & GENER the ability to offer dial-up, ISDN, wireless or Ethernet connectivity with one product design.

The ERCO & GENER GenIP provides a user-friendly Ethernet interface to collect automation data. This data is then remotely managed from a PC via a range of connectivity options (PSTN, GSM, Bluetooth, ISDN) thanks to the appropriate Multi-Tech SocketModem® module embedded in the GenIP. Its MMI is WEB centric. And, the PC can receive a flow of data or an Email to supervise the automation system. GenIP is compatible with MODBUS/TCP, a standard that is largely spread within the industry.

The SocketModem's flexible comm-port architecture provides dial-up, ISDN, wireless, or Ethernet socket connectivity with interchangeable modules. This means ERCO & GENER can utilize one system design and populate it with the appropriate connectivity options. Now they can provide their customers with a full-line of communication options by simply dropping in the communication module of choice.

"Multi-Tech is the only company proposing a unique interface," explains David Talon, Product Line Manager for ERCO & GENER. "The universal socket is an easy to use and easy to change universal solution allowing us to customize to each of our customer's needs with an off-the-shelf solution. In addition, with the universal socket, we are assured a seamless migration to future technologies."

The universal socket family of products from Multi-Tech used by ERCO & GENER include the SocketModem V.92/56K modem, the SocketModem ISDN 64/128K ISDN, the SocketModem EDGE, SocketModem GPRS, and SocketModem CDMA wireless modems, and the SocketWireless Bluetooth module.

## Universal Socket Connectivity

- Flexible comm-port architecture
- Interchangeable socket modules
- PSTN, ISDN, GSM/GPRS, CDMA, EDGE, Ethernet, or Bluetooth connectivity
- Cost-effective system design
- Easy migration to future designs

**ERCO & GENER** is a leader in the design & development of industrial communication systems. Since

1981, the company has been providing the M2M market with turnkey or off the shelf solutions using a wide range of connectivity (PSTN, ISDN, GSM/GPRS, CDMA,

EDGE and Bluetooth).
