

# Multi-Tech RouteFinder® SOHO Proves Too Tough to Crack

Falcon I.T. Services Provides a Secure Solution for Law Firm

When the partners at Alfaro & Fernandez, P.A., an immigration law firm based in Miami, Florida requested a highly secure network from its information technology company, Falcon IT Services, they never imagined how well it would pay off.

The Alfaro & Fernandez law firm once asked an individual to leave the building because he was becoming extremely upset. "He stormed out screaming that he was going to hack into my network," recalls Elbert Alfaro. "This person writes development code for a living and has a high degree of knowledge about network penetration. Naturally, I was very concerned."

A few days later, the individual telephoned Mr. Alfaro and apologized for his behavior. When asked if he was able to hack into the network, he replied "No. I tried but it was too hard."

The Alfaro & Fernandez network is hardened by several layers of security. The first layer is a Multi-Tech RouteFinder® SOHO (RF820-AP model), a supplement to the traditional firewall. Then the MAC address filter and separate wireless network segment provide additional layers of security above and beyond the traditional WEP. The packet filters allow gradient controls over the traffic coming in and going out of the WAN, LAN and wireless LAN.

Multi-Tech's RouteFinder SOHO security appliance is ideal for the small branch office or telecommuter who needs secure access to the corporate LAN. In addition to providing one or two WAN Ethernet port(s) for DSL or cable broadband Internet access, it also offers both client-to-LAN and LAN-to-LAN VPN connectivity based on the IPSec or PPTP protocols. The RouteFinder SOHO security appliance provides 168-bit 3DES and AES encryption to ensure that your information remains private. In addition, it offers secure Internet firewall services and 802.11b/g Wi-Fi connectivity.

## RouteFinder SOHO

- Stateful Packet Inspection firewall
- Up to 15 IPSec VPN tunnels
- Wired or Wi-Fi® LAN connectivity
- Broadband or dial-up WAN connectivity

## Alfaro & Fernandez, P.A.

is an immigration law firm based in Miami, Florida. The firm's information technology company, Falcon I.T. Services, chose Multi-Tech's highly secure RouteFinder SOHO because of its separate wireless segment, packet filter and MAC address filter features.

**Falcon I.T. Services** provides small and medium sized businesses with comprehensive information technology solutions typically available only to larger corporations. Its solutions help businesses leverage technology to increase revenues, reduce operating costs and deepen customer relationships.
