

## Jouvence Salons, Le Shoppe Salons Easy to Use VPN

A small business owner of three beauty salons in northern Virginia has found easy to use VPN capabilities with Multi-Tech's RouteFinder™ SOHO security appliance.

"The challenge for this business owner was how to tie their three systems together cost-effectively," explains Tom Cavanaugh, President of T C Solutions, a systems designer and integrator. "With several employees accepting appointments at more than one location, they needed the ability to access one system from any location in order to monitor their schedules."

The RouteFinder SOHO security appliance was a simple solution. For LAN-to-LAN connectivity, it uses the IPSec industry standard protocol, data encryption, and the Internet to provide high performance, secure VPN connections between the three locations as well as the owner's home and T C Solutions office. It provides up to 15 tunnels with strong 3DES or AES encryption using IKE and PSK key management to ensure information remains private.

"The owner monitors the schedules for each location from any other location and from his home," explains Cavanaugh. "In addition, I monitor the status of the networks and the servers at each location from our office. So far, the solution has worked flawlessly."

For off-site access, the RouteFinder SOHO security appliance supports the PPTP VPN client built into the Windows operating system. This provides 40-bit or 128-bit encryption, user name and password authentication. "The owner was able to process the payroll of each of the three locations from a laptop computer alongside the pool at a hotel in The Bahamas," said Cavanaugh. "It can't get any easier than that!"

T C solutions recommended the RouteFinder SOHO security appliance based on its simple setup, and reliable hardware and software. "Multi-Tech provides the best technical support I've ever received for any product from any company," Cavanaugh said.

### RouteFinder SOHO

- Stateful Packet Inspection firewall
- Up to 15 IPSec VPN tunnels
- Strong 3DES and AES encryption
- Shared Internet access via PPPoE, DHCP or static IP

The **Jouvence Salons, and Le Shoppe Salons**, in northern Virginia, are full service salons offering hair care, skin care and nail care services.

**T C Solutions** has been in business since 1986 building effective network systems, developing software, database and spreadsheet applications, and providing network training and support. Their customers include small businesses, large corporations, not-for-profit organizations, as well as government agencies.
