

busineSMS.com Software

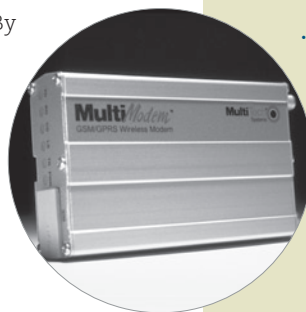

Quickly Create MMS Applications or MMS Enabled Web Sites

busineSMS.com Software is a leading provider of software solutions for mobile messaging. Their flagship product, the MercuryXMS Extreme Messaging Suite, accelerates mobile messaging development and deployment with a set of powerful and highly flexible solutions for mobile media. Bundled with the Multi-Tech MultiModem GPRS or CDMA wireless modem, companies can send and receive pictures, audio, video, and text messages directly from their own applications.

The MercuryXMS™ MM1/MMS solution brings new opportunities to developers, with a set of MMS messaging creation tools that will quickly bring media rich MMS applications to market. The MercuryXMS MM1/MMS solution provides full MMS/picture messaging send and receive functionality without direct carrier connections. By connecting the MultiModem GPRS or CDMA wireless modem directly to a PC, applications can start delivering MMS messages quickly and easily. Services include alerts, mobile marketing, security, video and music distribution and much more.

The MercuryXMS MM1/MMS solution accelerates time-to-market, and reduces costs and development efforts for server based messaging applications and web based messaging services. By integrating busineSMS.com Software's SDKs, and the bundled MultiModem wireless modems, developers will bring their project to market in a fraction of the time, knowing that messages are built on proven industry standards and tested against numerous devices on the market today.

"busineSMS.com Software requires a partner that can supply high quality hardware that works every time," explains Mark Lederhos, VP Sales & Marketing. "Multi-Tech's reputation in the industry drew us to them, and their product just works straight out of the box." busineSMS.com Software bundles the MultiModem GPRS and MultiModem CDMA wireless modems with their solutions for the North American market. The solutions are compatible for delivery into Sprint, Cingular Wireless, Verizon Wireless, T-Mobile, Alltel, U.S. Cellular and Leap Wireless.
