

Maintain Critical Communication when Disaster Strikes

During times of emergency, establishing prompt communications with your customers and remote offices can make all of the difference. Multi-Tech has the answer. Simply bridge your PBX to the cellular network with the CallFinder® GSM cellular gateway and gain affordable “peace of mind”.

Keep your Business and Customers Connected.

The CallFinder GSM gateway provides a communication back-up solution for PSTN failure, including emergency 911 service, and can be used as your primary voice network during disaster situations. Meet your company's disaster planning and businesses continuity initiatives with a simple and affordable solution that works with your existing phone system.

Use it for Everyday Business Communication.

The CallFinder GSM gateway provides toll-free calls to other cellular phones and can serve as a primary voice network for remote locations. With such attractive pricing for long distance calling on cellular service plans, the CallFinder GSM gateway is advantageous for use in everyday business communications.

Communications Security and Cost Savings.

The CallFinder GSM gateway connects directly to a PBX, KTS, or analog phone. It routes incoming and outgoing calls over a GSM network promising both communication security and cost savings to businesses of any size.

What are you Waiting for?

Enhance your voice network today, and gain phone system continuity and cost savings that will go straight to your bottom line.
