

# Cellular Gateway Diminishes Telecom Expenses

Cellular mobile costs have grown to account for over one-third of a company's telecommunications bill.\* Long distance charges can add up too. The good news is that now you can do something about these expenses. The MultiVOIP® GSM cellular helps you leverage cellular network plans to realize substantial savings on long distance toll charges and significantly reduce cellular telecom costs.

## The Turnkey Solution

The Multi-Tech MultiVOIP® GSM gateway connects directly to any business phone system and routes incoming and outgoing calls over a cellular network allowing companies to take advantage of their free "in-network" minutes. Not only are cell-to-cell calls free, but this also helps to reduce the number of pooled minutes needed. By placing MultiVOIP GSM units at all facilities, you can direct your VoIP traffic over a cellular connection and do not need to route traffic to the PSTN.

## Maximize Existing Investment

Available with two ports for communication over a SIP-to-cellular connection, the affordable MultiVOIP GSM gateway seamlessly integrates into your existing data and voice network infrastructure. As an added benefit, the MultiVOIP GSM serves as a backup connection to remote VoIP sites in case of external Internet failure.

## Realize Immediate Savings

Call [[Reseller's Name](#)] today to start benefitting from the significant savings and quick ROI that the MultiVOIP GSM cellular gateway brings.
