One of the staples that you'll find in an office environment is the standard facsimile appliance. Sometimes

# The FF200 provides a solid fax solution in a business environment.

ance allows the users to schedule fax releases at a certain release time for a unified and standard release of information. Within the corporate environment, the fax can be sent to the email box of recipients. This provides a secure avenue in a corporate environment to release sensitive information to a specifically designed group of recipients.

While the MultiTech Systems FaxFinder FF200 provides solid fax solutions within a networked business, one has to expect facsimile functional-

telephone ports that will be used with appliance. One to eight analog telephone ports can be used depending on the model however the FF200 model is the two port version. A single 10/100Base-T Ethernet port connects to the appliance to your corporate network. A web browser-based application is used to configure that various settings available with this appliance.

The MultiTech Systems FaxFinder FF200 makes business faxing much easier and available directly in your work area. This appliance is available

this involves a dedicated unit that is used for that specific purpose and in other cases this might mean a multi-purpose printer that includes faxing capabilities. Larger organizations have experienced the benefits of implementing a fax server in their network environment that are available with the use of a product like MultiTech Systems FaxFinder FF200 that receives our Editor's Choice Award for performance and value.

One of the key benefits of the FaxFinder FF200 is the ability to quickly produce and send fax documents that are used within an enterprise level facility. Other than the physical scan of the fax documents, all other elements

ity with those outside the environment. The appliance includes a dual analog telephone DID ports that can be used with a standard corporate PBX system. Users should consider publishing a dedicated phone line or PBX extension for this purpose that is used for both incoming and outgoing facsimile communications. In the case of an incoming fax, the server converts the information to a TIFF file and then emails the document to proper person's email address depending on the incoming DID information. Users of this product will be required to load a Windows-based application on their PC for sending and receiving purposes.

There are four different models of the FaxFinder that are available and is dependent on the number of analog

on the internet from several online resellers with the best price found at \$635. You can find more information on this product and other models of this series from the company's web site at [www.multitech.com](http://www.multitech.com).
