

ERCO & GENER

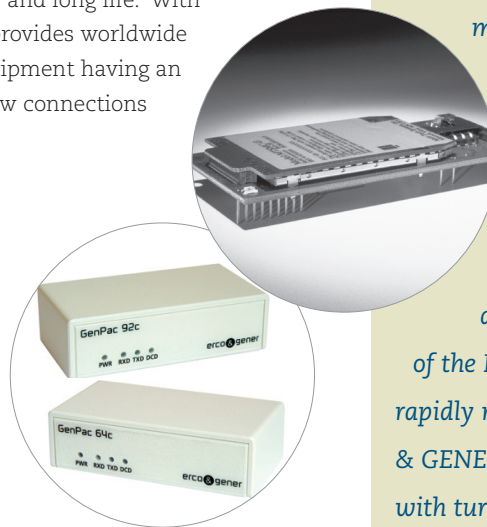

Turnkey M2M Data Collection with Universal Socket Connectivity Equals Off-the-shelf Solutions

ERCO & GENER has been providing the M2M market with turnkey and off-the-shelf solutions since 1981. Today, Multi-Tech has made their turnkey automatic data collection solutions even more valuable by providing a universal socket connectivity platform. This unique architecture gives ERCO & GENER the ability to offer dial-up or ISDN connectivity with one product design.

Applications such as remote surveillance and remote maintenance requiring high quality transfer in the "machine-to-machine" market segment have always called upon leading-edge technology combining robustness, reliability and long life. With its concentration of high-technology, the GenPac Family provides worldwide ISDN (GenPac64c) or PSTN (GenPac 92c) access for all equipment having an RS-232 or USB connection. CE, CB and FCC approvals allow connections over worldwide Public Switched Telephone Networks.

Integrated into the GenPac Family of solutions are the SocketModem® V.92/56K modem and the SocketModem ISDN 64/128K ISDN devices. The SocketModem's flexible comm-port architecture provides dial-up or ISDN socket connectivity with interchangeable modules (wireless or Ethernet connectivity is also available). This means ERCO & GENER was able to utilize one system design, populate it with V.92 or ISDN SocketModem connectivity, to generate two GenPac communication solutions.

"Multi-Tech is the only company proposing a unique interface," explains David Talon, Product Line Manager for ERCO & GENER. "The universal socket is an easy to use and easy to change universal solution allowing us to customize to each of our customer's needs with an off-the-shelf solution. We can propose a worldwide compatible solution with one product design. In addition, with the universal socket, we are assured a seamless migration to future technologies," said Talon.

Universal Socket Connectivity

- Flexible comm-port architecture
- Interchangeable socket modules
- PSTN, ISDN, GSM/GPRS, CDMA, EDGE, Ethernet, or Bluetooth connectivity
- Cost-effective system design
- Easy migration to future designs

ERCO & GENER situated in the machine-to-machine communication

market since its creation in 1981, ERCO & GENER conceives, manufactures and commercializes communication systems meeting the demands for robustness, reliability and long life. The experience of the R&D department allows it to rapidly realize custom designs. ERCO & GENER is providing the M2M market with turnkey or on the shelf solutions using a wide range of connectivity (PSTN, ISDN, GSM/GPRS, CDMA, EDGE, or Bluetooth).
