

ARGO Tracker

High Performance Asset Tracking via Cellular Wireless Connections

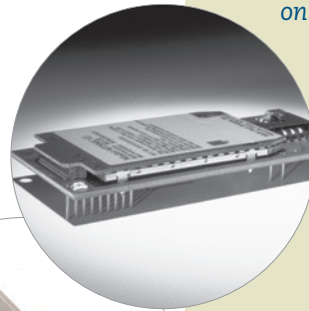

Today's tighter margins require companies to outperform their competition through better service, better quality and better pricing. Knowing where a product is at all times is a critical factor for any company. ARGO Tracker can help achieve this by globally securing company assets as they move throughout their distribution life cycle. ARGO Tracker means security for businesses looking to improve ROI, increase productivity, reduce customer churn and meet the accelerating advance of federal regulations and compliance standards.

Early on, ARGO engineers identified the advantages of using GPS and satellite networks to track their data in real-time. The ARGO Tracker solution consists of a 5.8"(L) x 4.38"(W) x 2.06", multi-sensor-capable, hardware transmitter utilizing state of the art satellite, cellular, and sensor technology to allow clients the ability to track their assets in real-time using any standard web browser. Using the Multi-Tech SocketModem GPRS or CDMA wireless modem and global positioning technology, ARGO Tracker enables its customers to monitor their assets from virtually anywhere in the world via the Internet and report their positions with precise accuracy.

The SocketModem module is embedded in the ARGO Tracker device providing a cellular wireless connection to the Internet. ARGO Tracker is a true thin-client solution collecting data and sending it back to a host system over the Wide Area Network connection provided by the SocketModem module.

"Given the robust performance characteristics of the ARGO Tracker, we needed a wireless solution that was reliable under a variety of critical environmental conditions," explains Gary Kochis, Chief Technical Officer of ARGO Tracker. "Since we had previous experience with Multi-Tech's analog modems and can attest to their high quality products and top-notch customer service, choosing their wireless module for our solution made perfect sense."

To facilitate broad utilization among companies comprising various –often conflicting– business and technological infrastructures, ARGO Tracker offers three unique business solutions that address the needs of virtually any business size and system. Given the flexibility of ARGO Tracker's business solutions and extensive multi-sensor capabilities, ARGO Tracker customers are provided complete asset accountability throughout the entire supply chain and product distribution lifecycle.

SocketModem GPRS

- GPRS Class 10
- Dual-band 850/1900 or 900/1800 MHz GSM/GPRS
- Packet data up to 85.6K bps
- Universal Socket Connectivity

SocketModem CDMA

- CDMA2000 1xRTT
- Dual-band 800/1900 MHz CDMA
- Packet data up to 153.6K bps forward and reverse
- Universal Socket Connectivity

ARGO Tracker, is a spin-off

from Argo-Tech Corporation based

on technology developed over

the last eight years within

Argo-Tech's Strategic R&D

Group. The ARGO Tracker

solution allows clients the ability to track their assets in

real-time using any standard

web browser. Given the flexibility

of ARGO Tracker's business solutions

and extensive multi-sensor capabilities,

ARGO Tracker customers are provided

complete asset accountability

throughout the entire supply chain and

product distribution lifecycle.
