Legal Notices

The MultiTech products are not designed, manufactured or intended for use, and should not be used, or sold or re-sold for use, in connection with applications requiring fail-safe performance or in applications where the failure of the products would reasonably be expected to result in personal injury or death, significant property damage, or serious physical or environmental damage. Examples of such use include life support machines or other life preserving medical devices or systems, air traffic control or aircraft navigation or communications systems, control equipment for nuclear facilities, or missile, nuclear, biological or chemical weapons or other military applications (“Restricted Applications”). Use of the products in such Restricted Applications is at the user’s sole risk and liability.

MULTITECH DOES NOT WARRANT THAT THE TRANSMISSION OF DATA BY A PRODUCT OVER A CELLULAR COMMUNICATIONS NETWORK WILL BE UNINTERRUPTED, TIMELY, SECURE OR ERROR FREE, NOR DOES MULTITECH WARRANT ANY CONNECTION OR ACCESSIBILITY TO ANY CELLULAR COMMUNICATIONS NETWORK. MULTITECH WILL HAVE NO LIABILITY FOR ANY LOSSES, DAMAGES, OBLIGATIONS, PENALTIES, DEFICIENCIES, LIABILITIES, COSTS OR EXPENSES (INCLUDING WITHOUT LIMITATION REASONABLE ATTORNEYS FEES) RELATED TO TEMPORARY INABILITY TO ACCESS A CELLULAR COMMUNICATIONS NETWORK USING THE PRODUCTS.

MultiConnect Cell MTC-LAT1 User Guide
Chapter 1 – Product Overview

About the MultiConnect Cell Modem

MultiConnect® Cell 100 Series MTC-LAT1 cellular modems are ready-to-deploy, standalone LTE Category 3 modems that provide wireless communication. The MTC-LAT1 is a compact communications platform that provides cellular capabilities for fixed and mobile applications. It is intended for use in energy, utility, or industrial settings. The MTC-LAT1 is available with RS-232 and optional GPS connector, or as a USB to Cellular device.

Documentation

The following documentation is available on the MultiTech Installation Resources website at www.multitech.com/setup.product.go.

Descriptions of LEDs

The top panel contains the following LEDs:

- **Power and Terminal Ready LEDs**—The Power LED indicates that DC power is present and the TR LED indicates when the unit is ready to receive data.
- **Modem LEDs**—Two modem LEDs indicate carrier detection and link status.
- **Signal LEDs**—Three signal LEDs display the signal strength level of the wireless connection.

### LED Indicators

<table>

Chapter 2 – Safety Warnings

Radio Frequency (RF) Safety
Due to the possibility of radio frequency (RF) interference, it is important that you follow any special regulations regarding the use of radio equipment. Follow the safety advice given below.

- Operating your device close to other electronic equipment may cause interference if the equipment is inadequately protected. Observe any warning signs and manufacturers’ recommendations.
- Different industries and businesses restrict the use of cellular devices. Respect restrictions on the use of radio equipment in fuel depots, chemical plants, or where blasting operations are in process. Follow restrictions for any environment where you operate the device.
- Do not place the antenna outdoors.
- Switch OFF your wireless device when in an aircraft. Using portable electronic devices in an aircraft may endanger aircraft operation, disrupt the cellular network, and is illegal. Failing to observe this restriction may lead to suspension or denial of cellular services to the offender, legal action, or both.
- Switch OFF your wireless device when around gasoline or diesel-fuel pumps and before filling your vehicle with fuel.
- Switch OFF your wireless device in hospitals and any other place where medical equipment may be in use.

Interference with Pacemakers and Other Medical Devices

Potential interference
Radio frequency energy (RF) from cellular devices can interact with some electronic devices. This is electromagnetic interference (EMI). The FDA helped develop a detailed test method to measure EMI of implanted cardiac pacemakers and defibrillators from cellular devices. This test method is part of the Association for the Advancement of Medical Instrumentation (AAMI) standard. This standard allows manufacturers to ensure that cardiac pacemakers and defibrillators are safe from cellular device EMI.

The FDA continues to monitor cellular devices for interactions with other medical devices. If harmful interference occurs, the FDA will assess the interference and work to resolve the problem.

Precautions for pacemaker wearers
If EMI occurs, it could affect a pacemaker in one of three ways:

- Stop the pacemaker from delivering the stimulating pulses that regulate the heart's rhythm.
- Cause the pacemaker to deliver the pulses irregularly.
- Cause the pacemaker to ignore the heart's own rhythm and deliver pulses at a fixed rate.

Based on current research, cellular devices do not pose a significant health problem for most pacemaker wearers. However, people with pacemakers may want to take simple precautions to be sure that their device doesn't cause a problem.

- Keep the device on the opposite side of the body from the pacemaker to add extra distance between the pacemaker and the device.
- Avoid placing a turned-on device next to the pacemaker (for example, don’t carry the device in a shirt or jacket pocket directly over the pacemaker).
Antenna

The antenna intended for use with this unit meets the requirements for mobile operating configurations and for fixed mounted operations, as defined in 2.1091 and 1.1307 of the FCC rules for satisfying RF exposure compliance. If an alternate antenna is used, consult user documentation for required antenna specifications.
Chapter 3 – Installing and Using the Device

Installing the Device

1. Connect suitable antenna(s) to the antenna connector(s).
2. If your device is the serial version:
   - Connect the DE9 male connector (9-pin) of the RS-232 cable to the RS-232 connector on the device, then connect the other end to the serial port on the other desired device.
   - Screw-on the power lead from the power supply module into the power connection on the device.
   - Plug the power supply into your power source.
3. If your device is the USB version:
   - For information about the USB cable that helps power your device, see the section "USB Cable Recommendations."
   - The USB cable uses power from the USB power line. Connect one end of the USB cable to your computer or other USB high power device, such as a hub.
   - Connect the other end to the device’s USB connector.
4. The POWER LED lights after the device powers up.

Placing Serial Devices in Power Save Mode

The serial devices offer a low power mode (sleep or power save mode) using the power save switch (below the SIM card slot) on the device to change from normal or low power mode. The low power mode is intended for battery or solar-powered, IoT applications such as outdoor remote sensors.

There are other techniques to place the device into low power mode. This example uses data terminal ready (DTR) and the AT command +CFUN=5. For other techniques, review the AT command guide for your device, as described in the Documentation section of this guide.

The device also wakes up from sleep mode by using the wake-on-ring feature. See the following example using the ring indicator line to wake the host processor when the radio receives an incoming call or SMS message. Your application then needs to act on the ring indication and wake up the device by asserting DTR.

Using Low Power Mode

Here are some different configuration options for low power mode:

- To turn on low power mode, set the power-save switch to LOW.
- On the RS-232 interface, ensure your application controls DTR and makes it active (on). To configure the device for DTR control, issue either AT&D1 or AT&D2 for DTR control. The &D0 command does not allow low power to operate.
- To configure the device to enter low power (sleep) mode, issue AT+CFUN=5 to the radio.
- To configure the device to wake from low power mode by using the wake-on-ring feature, issue AT#E2SMSRI=1000. This configures the ring indicator to go active for 1000 ms when an SMS message is received.
- To have the device enter sleep mode, set DTR to inactive (off) on the RS-232 interface. The clear to send (CTS) signal is off when the device is in sleep mode.
USB Cable Recommendations

If your device has a USB connector, to avoid enumeration or power issues:

- Use a high-speed USB cable that is as short as possible.
- Use a well-shielded cable with at least 24 AWG wire pair for power/ground and 28 AWG wire pair for data lines.
- If possible, use a USB port that connects directly to the motherboard rather than a USB port with added cabling inside the computer chassis.
- Use USB 3.0 ports if available. These ports are typically rated for more current.
- You can order the USB cable through MultiTech. The part number is CA-USB-A-MINI-B-3

Powering Down Your Device

**CAUTION:** Failing to properly power down the device before removing power may corrupt your device’s file system.

To properly power down your device, use the following sequence:

1. Issue the AT#SHDN command.
2. Wait 30 seconds.
3. Power off or disconnect power.

**Note:** If you send AT#SHDN and do not remove power, the radio restarts after 60 seconds.

Installing a SIM Card

This model requires a SIM card, which is supplied by your service provider. To install the SIM card:

1. Locate the SIM card slot on the side of the modem. The slot is labeled SIM.
2. Slide the SIM card into the SIM card slot with the contact side facing down as shown. When the SIM card is installed, it locks into place.
Removing a SIM Card

To remove the SIM card, push the SIM card in. The device ejects the SIM card.

Mounting Device to Flat Surface

1. Locate the groove on the bottom of the device.
2. Slide the mounting bracket through the groove.
3. To secure the bracket to the desired surface, place and tighten two screws in the holes on either end of the mounting bracket. The dimensions illustration in this guide shows the mounting bracket, as well as the dimensions for placement of the screws.

LTE Antenna Diversity

Antenna diversity uses two receive antennas to improve the downlink connection (cell tower to mobile). It has no effect on the uplink (mobile to cell tower).

Antenna diversity is useful in environments where the signal arrives at the device after bouncing off or around buildings or other objects. The bounced signal may be attenuated by going through semi-transparent (to the signal) objects. Each signal alteration can change its magnitude, phase, orientation, or polarization. This complex environment can exist in cities, inside buildings or in traffic. In this environment, signal paths from the cell tower form an interference pattern of peaks and nulls. These peaks and nulls can be very close together.

Antenna diversity provides an advantage in complex environments because if one receive antenna has a poor signal due to an interference null pattern, the other antenna is likely not in the null and has better reception. The radio compares the reception from both receive antennas and uses the one with the strongest signal.

Important: You must deploy with two antennas, unless your carrier has authorized you to deploy with one antenna.

Selecting Antennas

Select an antenna based on your product and application. Typically, both antennas are the same and either can be the main receive antenna.

Placing External Antennas

Antennas are usually a quarter wavelength apart from each other. With multiband radios where the quarter wavelengths in each band are diverse from each other, this rule may not be practical. Choose spacing based on the band used most often or the band with connection difficulty. Some environments are harsher on particular bands. MultiTech products have antenna connectors at the best spacing for the product size.

Placing antennas in close proximity to each other is not optimal, but you can do it if necessary. It depends on the signal strength to and from each antenna.

If the antennas are too close together for your application, use a similar antenna on a short cable for the second receive only antenna.

Placing GPS Antennas

GPS antennas need a clear view of the sky. Position the GPS antenna so the diversity antennas do not block its view of the sky.
Antenna Approvals and Safety Considerations

Note the following:

- Carriers conduct antenna diversity tests.
- There are no EMC concerns about antenna diversity.
- All antennas need to have a minimum flammability rating.
- Safety requirements depend on your final product.
- Unless otherwise noted, antennas certified by MultiTech are not approved for outdoor use. Do not extend these antennas outside of any building.

Diversity and Power Draw

There are no significant power draw differences.
Chapter 4 – Antenna and Activation Information

Antenna

The antenna intended for use with this unit meets the requirements for mobile operating configurations and for fixed mounted operations, as defined in 2.1091 and 1.1307 of the FCC rules for satisfying RF exposure compliance. If an alternate antenna is used, consult user documentation for required antenna specifications.

Antenna System Cellular Devices

The cellular/wireless performance depends on the implementation and antenna design. The integration of the antenna system into the product is a critical part of the design process; therefore, it is essential to consider it early so the performance is not compromised. If changes are made to the device’s certified antenna system, then recertification will be required by specific network carriers.

LTE Antenna Information

The cellular radio portion of the device is approved with the following antenna or for alternate antennas meeting the given specifications.

Manufacturer: EAD Ltd.
Description: LTE Antenna with SMA-Male Connector
Model Number: WTR7270
MultiTech Part Number: 45009760L

Account Activation for Cellular Devices

Some MultiTech devices are pre-configured to operate on a specific cellular network. To use the device, you must set up a cellular data account with your service provider. Each service provider has its own process for adding devices to their network.

Device Phone Number

Every device has a unique phone number. Your service provider supplies a phone number when you activate your account. Wireless service provider implementation may vary. Consult with your service provider to get the phone number for your device.
Chapter 5 – Configuring and Communicating with Your Device

Interacting with Your Device Overview

This section describes how to use AT commands to interact with your device. Using terminal software such as Kermit, you can issue AT commands to communicate with and configure your modem. The AT commands let you establish, read and modify device parameters and help you control how the device operates. This section documents basic interactions with your device, such as verifying signal strength and network registrations, sending and reading SMS text messages, and sending and receiving data.

Generally, USB modems are used as unintelligent bit pipes. In Windows, this means you create a dial-up network connection that uses the Windows IP stack to use the modem to create a PPP connection to the cellular network. The modem is assigned an IP address from the cellular carrier. This connection provides Internet access and is the basis for TCP/IP communication for sending and receiving email, creating TCP/UDP Sockets, or putting and getting files from an FTP server.

In Linux, PPPD is used to dial the modem and create the connection to the cellular TCP/IP network. This provides Internet access for sending and receiving email, creating TCP/UDP Sockets, or putting and getting files from an FTP server.

Before Using the Device

Before using the device:

- Install any drivers. Refer to the separate driver installation guide for your device.
- Power up your device and ensure it is connected to your computer that issues AT commands.
  
  **Note:** Wait 10 seconds after power-up before issuing any AT commands.
- Install terminal software that can communicate with the device, such as HyperTerminal, Tera Term, Kermit, or Putty.

Using Command Mode and Online Data Mode

Modems have two operation modes, command and online data. After power up, the modem is in command mode and ready to accept AT commands.

Use AT commands to communicate with and configure your modem. These commands establish, read, and modify device parameters and control how the modem works. The device also generates responses to AT commands that help determine the modem’s current state.

If the modem is in online data mode, it only accepts the Escape command (+++).

To send the modem AT Commands from terminal emulation software, set the software to match the modem’s default data format, which is:

- Speed: 115,200 bps
- Data bits: 8
- Parity: none
- Stop bit: 1
- Flow control: hardware

To confirm communication with the device:

- Type `AT` and press `Enter`.

If the device responds with OK, it is properly communicating.

**Verifying Signal Strength**

To verify the device signal strength, enter:

`AT+CSQ`

The command indicates signal quality, in the form:

`+CSQ: <rssi>,<ber>`

Where:

<table>
<thead>
<tr>
<th><code>&lt;rssi&gt;</code></th>
<th>Received signal strength indication.</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>(-113) dBm or less</td>
</tr>
<tr>
<td>1</td>
<td>(-111) dBm</td>
</tr>
<tr>
<td>2-30</td>
<td>(-109) dBm - (-53) dBm / 2 dBm per step</td>
</tr>
<tr>
<td>31</td>
<td>(-51) dBm or greater</td>
</tr>
<tr>
<td>99</td>
<td>Not known or not detectable</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><code>&lt;ber&gt;</code></th>
<th>Bit error rate, in percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Less than 0.2%</td>
</tr>
<tr>
<td>1</td>
<td>0.2% to 0.4%</td>
</tr>
<tr>
<td>2</td>
<td>0.4% to 0.8%</td>
</tr>
<tr>
<td>3</td>
<td>0.8% to 1.6%</td>
</tr>
<tr>
<td>4</td>
<td>1.6% to 3.2%</td>
</tr>
<tr>
<td>5</td>
<td>3.2% to 6.4%</td>
</tr>
<tr>
<td>6</td>
<td>6.4% to 12.8%</td>
</tr>
<tr>
<td>7</td>
<td>More than 12.8%</td>
</tr>
<tr>
<td>99</td>
<td>Not known or not detectable</td>
</tr>
</tbody>
</table>

**Note:** Signal strength of 10 or higher is needed for successful packet data sessions.
Example
A example response to AT+CSQ:
+CSQ: 15,1

Checking Network Registration
Before establishing a packet data connection, verify the device registered on the network. To do this enter the network registration report read command:

AT+CREG?
If the device returns:
+CREG: 0,1
or
+CREG: 0,5
The device is registered.
If the device returns:
+CREG: 0,2
The device is in a network searching state.

Sending and Receiving Data

Connecting Device to TCP Server as TCP Client

1. Bring up Data Connection Using Internal IP stack
   Enter:
   AT#SGACT=1,1
   The device responds with the IP Address the cellular provider assigned to the device on connection, followed by OK. For example:
   #SGACT: 25.194.185.116
   OK

2. Create Client Connection to TCP Server on Port 500
   Enter:
   AT#SD=1,0,500,"###.##.###.##"
   where ###.##.###.## is the TCP server IP Address.
   The device responds with OK. You can now send or receive data without entering additional commands.

Closing the Socket and the Connection
To close the socket:

- Enter the escape sequence:
  +++
- To close Socket 1, enter:
AT#SH=1
The device responds with OK.

To close the data connection:

Enter:
AT#SGACT=1,0
The device responds with OK.

### Configuring Device as UDP Listener to Accept UDP Client Connections ###

To configure the device as a UDP client:

1. **Check signal strength.**
   Enter:
   ```
   AT+CSQ
   ```

2. **Verify device is registered on the cellular network.**
   Enter:
   Should return:
   ```
   +CREG 0,1
   OK
   ```

3. **Configure socket parameters**
   Enter:
   ```
   AT#SCFG=1,1,300,240,600,50
   ```

4. **Activate context one**
   Enter:
   ```
   AT#SGACT=1,1
   ```

5. **Set firewall rule to accept connections:**
   ```
   AT#FRWL=1,"###.##.###.#","###.##.###.#"
   ```
   where ###.##.###.# represents the IP range. For example:
   ```
   AT#FRWL=1,"204.26.122.1","204.26.122.255"
   ```

6. **Set connection ID 1 for UDP listening mode on port 7000.**
   Enter:
   ```
   AT#SLUDP=1,1,7000
   ```
   The device responds with and unsolicited indication that a host is trying to connect to connection ID 1 on port 7000.
   ```
   SRING: 1
   ```

7. **Accept incoming connection ID 1**
   Enter:
   ```
   AT#SA=1
   ```
   The device indicates a client successfully established a listener connection.
   ```
   CONNECT
   ```
   You can send and receive data.
Exit Data Mode and Close Connection

To exit data mode and close the socket:

■ Enter the escape sequence:
+++ 

■ To close Socket 1, enter:
AT#SH=1

The device responds with OK.

■ To close the data connection, enter:
AT#SGACT=1,0

The device responds with OK.

Configuring Device as UDP Client to Connect to UDP Server

Configure and Connect the Device

To configure the device as a UDP client:

1. Check signal strength.
   Enter:
   AT+CSQ

2. Verify device is registered on the cellular network.
   Enter:
   Should return:
   +CREG: 0,1
   OK

3. Configure socket parameters
   Enter:
   AT#SCFG=1,1,300,240,600,50

4. Activate context one
   Enter:
   AT#SGACT=1,1

5. Create UDP connection to Server port
   Enter:
   AT#SD=1,1,####,"###.##.###.##"
   where #### is the server port and ###.##.###.## is the IP number.

The device responds with OK, which indicates a successful connection. You can send and receive data through the socket connection.

Exit Data Mode and Close Connection

To exit data mode and close the socket:

■ Enter the escape sequence:
+++ 

■ To close Socket 1, enter:
AT#SH=1

The device responds with OK.

- To close the data connection, enter:
  AT#SGACT=1,0

The device responds with OK.

**Transferring FTP File to FTP Server**

To connect to FTP server and upload files:

1. **Check signal strength.**
   Enter:
   AT+CSQ

2. **Activate context one**
   Enter:
   AT#SGACT=1,1

3. **Set FTP operations timeout to 10 seconds**
   Enter:
   AT#FTPTO=1000

4. **Configure FTP server IP address with username and password.**
   Enter:
   AT#FTPOPEN="###.##.###.#","username","password",0
   where ###.##.###.# is the IP address and the username and password for the FTP server.

5. **Configure file transfer type.**
   Enter:
   AT#FTPTYPE=#
   where # is 0 for binary or 1 for ASCII.

6. **Enter the file name to be sent to the FTP server and initiate connection.**
   Enter:
   AT#FTPPUT="file.txt"
   The device responds with:
   CONNECT

7. **Send the file through the device.**

**Closing the FTP Data Connection**

When you finish sending the file:

1. **Enter the escape sequence.**
   Enter:
   +++
   The device responds with:
   NO CARRIER

2. **Close the FTP connection.**
   Enter:
AT#FTPCLOSE

3. Close the PPP data connection.
   Enter:
   AT#SGACT=1,0
   The device responds with OK.

Downloading File from FTP Server

To connect to an FTP server and download files:

1. Check signal strength.
   Enter:
   AT+CSQ

2. Activate context one
   Enter:
   AT#SGACT=1,1

3. Set FTP operations timeout to 10 seconds
   Enter:
   AT#FTPTO=1000

4. Configure FTP server IP address with username and password.
   Enter:
   AT#FTPOPEN="###.##.###.#","username","password",0
   where ###.##.###.# is the IP address and the username and password for the FTP server.

5. Configure file transfer type.
   Enter:
   AT#FTPTYPE=#
   where # is 0 for binary or 1 for ASCII.

6. If required, change the working directory to "folder1".
   Enter:
   AT#FTPCWD="folder1"

7. Enter the file name.
   Enter:
   AT#FTPGET="filename.txt"
   where filename.txt is the file you want to download.
   The device responds with:
   CONNECT
   The file is received through the device. The device responds with:
   NO CARRIER
   The data connection closes automatically when the file sending ends.

Closing the FTP Data Connection

When you finish sending the file:

1. Close the FTP connection.
   Enter:
AT#FTPCLOSE

2. Close the PPP data connection.
   Enter:
   AT#SGACT=1,0
   The device responds with OK.

**Reading, Writing and Deleting Messages**

**Reading Text Messages**

To read a text message in text mode:

1. **Put the device in text mode.**
   Enter:
   AT+CMGF=1

2. **Read message.**
   Enter:
   AT+CMGR=1

Example response:

```
+CMGR: "REC UNREAD","+10001112222z`z","","13/09/05,13:39:40-20"
```

How are you?
OK

Where 0001112222 is the phone number.

**Writing Text Messages**

To send a text message in text mode:

1. **Put the device in text mode.**
   Enter:
   AT+CMGF=1
   The device responds.
   OK

2. **Enter the recipient's number and your message.**
   Enter:
   AT+CMGS="##########"
   >Your message here
   where ########## is the recipient's number.

3. **Send the message.**
   Enter CTRL+Z.
   The device responds:
   +CMGS: #
   OK
   where # is the reference number of the sent message.

For example:
AT+CMGF=1
OK
AT+CMGS="0001112222"
> How are you?  <CTRL+Z to send>
+CMGS: 255
OK

Where 0001112222 is the phone number.

Deleting Messages

To delete one text message, enter:

**AT+CMGD=I,#**

where I is the index in the select storage and # is the delflag option. Enter:

0  Deletes message in the specified index.
1  Deletes all read messages. Leaves unread messages and stored device-originated messages.
2  Deletes all read and sent device-originated messages. Leaves unread messages and unsent device-originated messages.
3  Deletes all read messages and sent and unsent device-originated messages. Leaves unread messages.
4  Deletes all messages.

For example:

AT+CMGD=1 (delete message at index 1)
AT+CMGD=2 (delete message at index 2)
AT+CMGD=1,0
AT+CMGD=1,1
AT+CMGD=1,2
AT+CMGD=1,3
AT+CMGD=1,4
Chapter 6 – Regulatory Information

Industry Canada Class B Notice

This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

Cet appareil numérique de la classe B respecte toutes les exigences du Reglement Canadien sur le materiel brouilleur.

This device complies with Industry Canada license-exempt RSS standard(s). The operation is permitted for the following two conditions:

1. the device may not cause interference, and
2. this device must accept any interference, including interference that may cause undesired operation of the device.

Le present appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisee aux deux conditions suivantes:

1. l'appareil ne doit pas produire de brouillage, et
2. l'appareil doit accepter tout brouillage radioelectrique subi, meme si le brouillage est susceptible d'en compromettre le fonctionnement.

Industry Canada and FCC

This device complies with Industry Canada licence-exempt RSS standard(s) and part 15 of the FCC rules. Operation is subject to the following two conditions:

(1) this device may not cause interference, and
(2) this device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme avec Industrie Canada RSS exemptes de licence standard (s) et la partie 15 des règles de la FCC. Son fonctionnement est soumis aux deux conditions suivantes:

1. l'appareil ne doit pas produire de brouillage, et
2. l'utilisateurs de l'appareil doit accepter tout brouillage radioélectrique subi, meme si le brouillage est susceptible d'en compromettre le fonctionnement.

47 CFR Part 15 Regulation Class B Devices

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
Consult the dealer or an experienced radio/TV technician for help.

**Warning:** Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

**FCC Interference Notice**
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

**Restriction of the Use of Hazardous Substances (RoHS)**

![RoHS Compliant](image)

**Multi-Tech Systems, Inc.**

**Certificate of Compliance**

**2011/65/EU**

Multi-Tech Systems, Inc. confirms that its embedded products comply with the chemical concentration limitations set forth in the directive 2011/65/EU of the European Parliament (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment - RoHS).

These MultiTech products do not contain the following banned chemicals¹:

- Lead, [Pb] < 1000 PPM
- Mercury, [Hg] < 1000 PPM
- Hexavalent Chromium, [Cr+6] < 1000 PPM
- Cadmium, [Cd] < 100 PPM
- Polybrominated Biphenyl, [PBB] < 1000 PPM
- Polybrominated Diphenyl Ether, [PBDE] < 1000 PPM

**Environmental considerations:**

- Moisture Sensitivity Level (MSL) =1
- Maximum Soldering temperature = 260°C (in SMT reflow oven)

¹Lead usage in some components is exempted by the following RoHS annex, therefore higher lead concentration would be found in some modules (>1000 PPM);
- Resistors containing lead in a glass or ceramic matrix compound.
Information on HS/TS Substances According to Chinese Standards

In accordance with China’s Administrative Measures on the Control of Pollution Caused by Electronic Information Products (EIP) # 39, also known as China RoHS, the following information is provided regarding the names and concentration levels of Toxic Substances (TS) or Hazardous Substances (HS) which may be contained in Multi-Tech Systems Inc. products relative to the EIP standards set by China’s Ministry of Information Industry (MII).

*O* 表示不含该物质或者该物质的含量水平在上述限量要求之内。
Chapter 7 – Using Connection Manager

Use Connection Manager to install device drivers and connect your device to your carrier's network.

Connection Manager can install drivers and connect your device regardless of your CDMA network, however, activation is only supported with Verizon, Aeris, Sprint, and some CDMA Regional Carriers. If you cannot activate your device with Connection Manager, refer to Account Activation for Cellular Devices.

Connection Manager supports the following Windows versions:
- Windows 7 and 8 and Windows 10, both 32-bit and 64-bit versions

Installing Connection Manager and Connecting a Device

Follow these steps in order. Attempting to plug in the device before the appropriate drivers are installed can cause the connection to fail.

2. Click Connection Manager.
3. Open or unzip the Connection Manager file and run the installer (.msi file).
4. If installing a USB device, follow the prompts to install the Telit drivers. Make sure that the Telit drivers are fully installed before plugging in the device.
5. If installing a serial device, refer to Setting Up a Serial Device.
6. Once the drivers are installed, plug in the device and click Next in the Connection Manager installation window.
7. Open Connection Manager.
8. In the Settings tab, select USB Modem or Serial Modem for your device.
9. If you are connecting a serial device, confirm that the serial settings match those listed for the device under Device Manager > Comm Ports.
10. If desired, set the application to load during Windows startup and automatically connect to the internet:
    a. Click Settings and check the boxes for Run application at Windows startup and Connect to the Internet automatically.
    b. Click Apply.
11. If desired, set Connection Manager to re-connect when a connection is lost:
    a. Click Connection and check Enable keep-alive.
    b. Enter an address to ping in the Host to ping box (for example, 8.8.8.8 which is www.google.com).
    
    Note: If the keep-alive fails, Connection Manager automatically reconnects. When you start the computer, Connection Manager launches and establishes a connection.
12. In the Connection tab, enter the Dial number and APN if different from the default. The dial number and APN is provided by the carrier for the SIM card.
13. Click Apply to save settings.
14. Click Main, then click Connect to start your connection.
    
    Note: The dial number and APN settings cannot be modified after the device is connected.
15. Browse to a website to confirm the device has Internet access.
Setting Up a Serial Device

1. Connect the serial device to the PC.
2. Navigate to Control Panel > Device Manager. Make note of the COM port number for the connected device (in COM Ports).
   Example: COM port is COM31.
3. In the Action drop-down menu, select Add legacy hardware to add a new device.
4. Navigate through Add Hardware Wizard.
   a. Click Next on the Welcome page.
   b. Select Install the hardware that I manually select from a list, then click Next.
   c. Select Modems, then click Next.
   d. Check Don't detect my modem; I will select it from a list, then click Next.
   e. Select Have Disk, then click Next.
f. Click **Browse** and select the installation folder.

   **Example:** `C:\Program Files (x86)\Multi-Tech Systems\Multi-Tech Connection Manager`.

g. The list of available TELIT models appears. Select the model number for your device, then click **Next**.
h. Select the COM port that you noted from COM ports, then click **Next**.

i. Click **Finish** to exit the Wizard.

j. Navigate to **Device Manager > Modems** and confirm that the device is added.

**Troubleshooting**

**Serial COM port is not available in the Serial Modem Settings**

This can happen if the modem was installed while Connection Manager was running.

Close Connection Manager and reopen it.

**Device is not detected ("No Device")**

After following the steps to activate your device, the Main tab still indicates "No Device."

Try the following steps:

1. Click the **Settings** tab and make sure that the appropriate modem type is selected: USB or Serial.
2. If you are connecting a serial device, make sure that all serial modem settings correspond to the serial modem and serial port configuration.
3. Restart Connection Manager.
4. Disconnect and reconnect the device.

**MultiConnect Cell USB Modem is not detected**

1. Check the Power and LS LEDs on the device. If they are not continuously lit, then the problem is with the power supply. Check the cable and connections.
2. USB device: Make sure that the device is connected to the PC and that the correct USB cable is in use.
