Vulnerability Details:

**Vulnerability Note VU#782720:**
- Two buffer overflow vulnerabilities were discovered in the Trusted Platform Module (TPM) 2.0 reference library specification, currently at Level 00, Revision 01.59 November 2019. An attacker who has access to a TPM-command interface can send maliciously-crafted commands to the module and trigger these vulnerabilities. This allows either read-only access to sensitive data or overwriting of normally protected data that is only available to the TPM (e.g., cryptographic keys).

**CVE-2023-1017**
- An out-of-bounds write vulnerability exists in TPM2.0's Module Library allowing writing of a 2-byte data past the end of TPM2.0 command in the CryptParameterDecryption routine. An attacker who can successfully exploit this vulnerability can lead to denial of service (crashing the TPM chip/process or rendering it unusable) and/or arbitrary code execution in the TPM context.
- CVVS Version 3.X Score: 7.8 – High

**CVE-2023-1018**
- An out-of-bounds read vulnerability exists in TPM2.0's Module Library allowing a 2-byte read past the end of a TPM2.0 command in the CryptParameterDecryption routine. An attacker who can successfully exploit this vulnerability can read or access sensitive data stored in the TPM.
- CVVS Version 3.X Score: 5.5 - Medium

**Summary**

After evaluation of all MultiTech products, it is determined MultiTech devices using TPM 2.0 components are not affected by this vulnerability.

**Customer Action Plan**

- No action required.
- Subscribe to MultiTech Security Alerts and Notifications for updates on this and other security-related issues.
