E-NET | RJ-45 receptacle for standard Ethernet 10/100 Base-T.
USB HOST | High-speed, standard USB 2.0 Type A connector.
POWER | 9.32 VDC power receptacle for provided power cord.

**Replacing the Battery**

You need:
- Phillips screwdriver
- Non-metal tweezers or similar object
- CR1632 standard coin lithium battery

The battery is located in the device housing. To install or replace the battery:

1. Disconnect power to the device. If it is connected.
2. At the front of the device housing, remove the screw that secures the nameplate to the housing and remove the nameplate.
3. The battery holder is located at the right side of the opening on the underside of the PC board. Use non-metal tweezers as necessary to remove an existing battery.
4. Orient the new battery so that the positive (+) pole is facing down. Use your fingers or non-metal tweezers to insert the battery into the holder.
5. Reattach the MultiTech nameplate to the housing using the screw removed in step 2.

**Attaching the Antenna**

1. Attach all available cellular antennas to the connectors in the upper corners of the device.
2. If you have a LoRa accessory card, attach the LoRa antenna to the connector located on that card.

**Additional Information**

For more details on the Conduit®, refer to the latest hardware and software information, including quick start guides, on the appropriate product page: https://www.multitech.com/products/multiconnect-conduit

MultiTech declares that this device is in compliance with the essential requirements and other relevant provisions of Directive 2014/30/EU. The declaration of conformity may be requested at https://support.multitech.com.

### Introduction

Conduit® is a programmable gateway that uses an open Linux development environment to enable machine-to-machine (M2M) connectivity using various wireless interfaces. It also provides an online application store as a platform for developers to provision and manage their gateway and associated sensors and devices.

### Package Contents

Your Conduit includes the following (varies with model):

- **Conduit**: 1 - MTCDT-Conduit
- **Power Supply**: 1 - 100-240V 9V-1.7A Power Supply with removable blades
  - 1 - NAM blade/plug
  - 1 - EURO blade/plug
  - 1 - UK blade/plug
- **Cables**: 1 - Micro USB Cable
- **Antennas**: Varies with Conduit Model

### Customer Notices

- **Quick Start Guide**: Registration Card

### Installing the SIM Card

You need:
- Phillips screwdriver
- Mini SIM card (2FF form factor)

To install or replace the SIM Card:

1. Disconnect power to the device, if it is connected.
2. At the front of the device housing, remove the screw that secures the nameplate to the housing and remove the nameplate.
3. At the upper right side of the opening, locate the SIM and its sleeve. If a SIM card is installed and needs to be removed, slide it out of the sleeve.
4. Gently push the new or replacement SIM card into the sleeve face up with the cut corner to the right and the SIM contacts facing toward the interior of the housing.
5. Reattach the nameplate to the housing using the screw removed in step 2.

### Installing the SD Card

You need:
- Phillips screwdriver
- SD memory card

To install or replace the SIM Card:

1. Disconnect power to the device, if it is connected.
2. At the front of the device housing, remove the screw that secures the nameplate to the housing and remove the nameplate.
3. Locate the SD card at the left side of the opening on the underside of the PC board. If an SD card is already installed, gently push on the card to release it from its setting and remove it from the housing with your fingers.
4. With the new SD card contacts facing up and toward the interior of the housing, gently push the card into the slot to secure it in place.
5. Reattach the nameplate to the housing using the screw removed in step 2.

### AEP model LEDs
